RE: The current ARRL web "OO" information seeks on 10 Meter intruders.

Three cheers to Mr. Rilley Hollingsworth, and Mr. Bill Cross of the FCC for there efforts to start action in this area.

The FCC should have established a "Tip Line" PO Box to submit complaints to without having to leave your name or personal ID to report Intruders into the 10 meter band, and Intruders into other part 90 radio services including the Police & Fire!

This program to protect 10 meters need's to be extended to other areas of Illegal services.

The news release through the ARRL is welcome mater to hams. Lots of the so called "Free Banders" have become useful hams. Reform from the Export Radios operators that cause so mutch interference to public safety between 24 Mhz and 35 Mhz! Yes once the fellows take the time to pass the tests, and see the advantages of Ham Radio they leave the so called "Free Band" in most cases.

The welcome request for information from the "OO's" should have been a bit broad-er, as some of the fellows hide out on Federal Frequencys, and IB users frequencys.

Perhaps up scale enformcmnt, and the passage of some part or form of this RM-10681 could make a stronger enforcment a ture useful tool.

Perhaps cutting a wire in a radio, or adding some parts, could also be considered "RE-Programing" the radio for out of band and require a Commerical License of sorts!
